### Did you know that?

Buziaş is the only resort of national interest in the west of the country, with the cardiovascular therapeutic profile, using in the treatment procedures natural cure factors, among which air-ionization: air concentration similar to an altitude of 1000 m, although the resort is located at an altitude of 128 m, the bioclimate being favorable to recovery and rest.  
 Also, the outdoor walks in the park around the hotel are beneficial to health; we recommend parents to walk together with the children in the ionized air for longer periods of time.

**IMPORTANT!** In case the tourists want to leave the holiday for personal reasons, the money paid for the package or the difference for the interrupted days will not be refunded.
